

Payment features

- **What features are available if I upgrade my account? Can I access them without paying?** Sadly some programs will say the only impact is loss of revenue (business impact?!) and may not accept this type of issue by itself, however from being able to upgrade from non-paying to paying you will unlock more features to play with!

- **Is it easily obtainable** from an XSS because it's in the HTML DOM? Chain XSS to leak payment information for higher impact. Some companies love to see impact so keep this in mind.

- **What payment options are available for different countries?** I've mentioned payment features because a specific target required phone verification to claim ownership of a page. They introduced a new feature to run ads and if I switched my country from the United Kingdom to the United States then I could enter my "Checking Account" details. The problem is, **sandbox details weren't blocked**. This allowed me to bypass all their verification mechanisms and I was granted ownership. You can find test numbers from sites such as <http://support.worldpay.com/support/kb/bg/testandgolive/tgl5103.html> and https://www.paypalobjects.com/en_GB/vhelp/paypalmanager_help/credit_card_numbers.htm

At this stage I recommend you go back to the beginning and read about the common bugs I look for and my thought process with wanting to find filters to play with, and then read about my first initial look at the site and questions I want answered. Then take a step and **visualize what you've just read**.

Can you see how I have already started to get a good understanding of how the site works and I've even potentially found some bugs already, with minimal
