When showing examples of applying the methodology you may see references to some of BugBountyHunter's web applications such as **BARKER**, **KREATIVE** and **FirstBlood**. Please note these web applications are for members only and more information on this can be found at https://www.bugbountyhunter.com/membership

Our web applications are designed to help you gain confidence when identifying vulnerabilities on web applications. There are **no flags** to find and instead you have to work out how each feature works on fully functionable websites. Just like it is on a real bug bounty program.

BugBountyHunter offers realistic web applications with real findings found by myself personally.
